Summary

Dedicated Front-End Developer with expertise in Angular and the MEAN stack, skilled in HTML, CSS, Bootstrap, and JavaScript for building responsive web applications. Experienced in real-time projects like Bookstore Management Systems with strong UI/UX implementation. Eager to expand backend skills and transition into a full-stack role. Committed to continuous learning, teamwork, and delivering high-quality solutions.

Skills

Platform : Windows
Web Design : HTML, CSS, Bootstrap
Programming : C, C++, PHP, Python, Java, JavaScript, Salesforce Admin, Angular

Projects

Online Bookstore Management -

A web-based bookstore platform featuring dedicated Admin and User modules. The Admin module allows seamless management of categories, books, authors, publishers, orders, and customer data. The User module supports customer registration, book browsing, cart management, purchases, and online payments. The system improves overall bookstore management while delivering a smooth and secure shopping experience to users.

Hospital Management System -

The system efficiently manages all aspects of hospital operations, offering a centralized platform for handling various hospital administration tasks. Additionally, our EMR software integrates with a third-party service called Rcopia, which provides access to a comprehensive medical database, enhancing clinical decision-making and prescription management.

Education

- High School 2021
- MDSU University 2024
Bachelor of Computer Applications
